

COMPUTER TRAINING SYSTEMS

CATALOG OF FIXED WING AIRCRAFT TRAINING PROGRAMS AND SYSTEM TUTORIALS

All of the aircraft listed below are COMPLETE training programs. These programs are comprehensive, in-depth text based learning programs covering the major systems of each aircraft. Typically, an aircraft program will minimally consist of Normal Procedures, Emergency Procedures, Limitations and on-board systems and procedures. Examinations drawn from the lesson material test each students retention. The Administrator provides on-line record keeping to monitor the individual pilot's progress. The programs satisfy the recurrent ground training requirements of FAR 135, subpart H. A full description of each aircraft's lessons will be provided upon request.

As indicated in the right column, many aircraft have dynamic graphic system tutorials on one or more systems of the aircraft.
