Land and Hold Short Operations

FIXED/ROTOR WING

IPAD COMPATIBLE

APPROX 0.9 HRS

Land and Hold Short Operations increase airport efficiency and capacity on heavily trafficked runways. Our Land and Hold Short Operations course instructs pilots on how to determine landing distance and weight requirements for LAHSO operations, as well as what provisions must be met prior to accepting LAHSO.

For Part 135, Part 125, and Part 91 pilot training, our Land and Hold Short Operations provides essential training for crewmembers authorized to perform LAHSO.

TUTORIALS

Land and Hold Short Operations

1. Introduction
2. Factors Affecting Landing Distance
3. LAHSO Requirements
4. LAHSO Procedures
5. Pilot-Controller Communications and Airport Markings

LESSONS

▶ Comprehensive examination covers subject matter from all lessons

Land and Hold Short Operations
