# Single-Pilot Resource Management

**FIXED/ROTOR WING**

**IPAD COMPATIBLE**

**APPROX 3.1 HRS**

Single-Pilot Resource Management uses many of the concepts of crew resource management and teaches pilots to apply them to single-pilot operations. Our SRM course covers managing outside and onboard resources prior to and during flight and enables pilots to accurately assess hazards, manage potential risks, and make good decisions.

For Part 135, Part 125, and Part 91 pilot training, our Single-Pilot Resource Management course provides a foundation of knowledge and understanding of resources available to pilots during single-pilot operations and fulfills Part 135 requirements for crew resource management training.

## TUTORIALS

### Single-Pilot Resource Management

1. What is SRM?
2. Risk Management for Single-Pilot Operations
3. Applying SRM

## LESSONS

▶ Comprehensive examination covers subject matter from all lessons

### Single-Pilot Resource Management

1. Automation Management
2. CFIT Awareness
3. Communications
4. Situational Awareness
5. Fatigue - Effects and Reduction
6. Stress - Effects and Reduction
7. Task Management
8. Aeronautical Decision Making
9. Risk Management
